REPORT NARRATIVE (REFERENCE STIPULATIONS BY NUMBER OR TITLE)

---

The estimate for volume removed on 9-13-90 is incorrect. The estimate should be 600 cubic yards. The estimate of 15000 is cubic feet. The quarry area is roughly estimated at approximately 20 paces X 30 feet high X 10 feet deep. My pace is 2.6 feet per pace.

The following equipment and parts were noted on site:

- generator unit
- diesel type motor
- other miscellaneous equipment and parts
- mobile screen
- drill
- bags of crushed stone

There was no noticeable change in the quarry face since my last visit on 9-13-90. Active quarrying of the stone appears to have been suspended since that date.

Michael Jackson  
Inspector
